

Amendments to the Claims

In response to the Official Action and in accordance with 37 CFR 1.121(c), please enter the following rewritten claims. This listing of claims will replace all prior versions and listings of the claims in this application.

Please cancel Claim 5 and Claims 12-16 without prejudice.

Please add new Claims 17-21.

1. *(Currently Amended)* A method for managing data including the steps of:
 - (a) creating a questionnaire comprising a series of questions;
 - (b) tokenizing said questionnaire; thereby producing a plurality of tokens representing said questionnaire;
 - (c) establishing a first network connection with a remote computing device;
 - (d) transmitting said plurality of tokens to a remote computing device via said first network connection;
 - (e) terminating said first network connection with said remote computing device;
 - (f)(d) after said first network connection is terminated, executing at least a portion of said plurality of tokens representing said questionnaire at said remote computing device to collect a response from a user;
 - (g) establishing a second network connection between said remote computing device and a server;
 - (h)(e) after said second network connection is established, transmitting at least a portion of said response from the user to a said server via a said second network connection; and

- ~~(i)(f)~~ storing said transmitted response at said server.
2. (*Currently Amended*) The method for managing data of claim 1 further comprising the step of:
- ~~(j)(g)~~ translating said response to a format recognizable by a particular computer program; and
- ~~(k)(h)~~ accessing the translated response from a computer executing said particular computer program.
3. (*Original*) The method for managing data of claim 1 wherein step (a) includes the substeps of:
- (a) creating a questionnaire by:
- (i) entering a series of questions into a questionnaire design computer program;
 - (ii) identifying within said questionnaire design computer program the type of response allowed for each question of said series of questions; and
 - (iii) identifying within said questionnaire design computer program a branching path in said questionnaire for each possible response to each question of said series of questions.
4. (*Original*) The method for managing data of claim 1 wherein step (b) includes the substeps of:

- (b) tokenizing said questionnaire thereby producing a plurality of tokens representing said questionnaire by:
 - (i) assigning at least one token to each question of said series of questions;
 - (ii) assigning at least one token to each response called for in said series of questions to identify the type of response required; and
 - (iii) assigning at least one token to each branch in said questionnaire to identify the required program control associated with said branch.
- 5. *(Cancelled)*
- 6. *(Currently amended)* A method for modifying a questionnaire used in data management according to the method of claim 1 including the steps of:
 - (a) making at least one incremental change to a portion of the questionnaire;
 - (b) tokenizing said at least one incremental change to said questionnaire;
 - (c) transmitting at least a portion of said tokens resulting from step (b) to a remote loosely networked computing device, said transmitted tokens comprising less than the entire tokenized questionnaire; and,
 - (d) incorporating said transmitted tokens into said questionnaire at said loosely networked remote computing device, thereby modifying said questionnaire.
- 7. *(Currently Amended)* A method for collecting survey data from a user comprising:
 - (a) designing a questionnaire having branching logic on a first computer platform;

- (b) automatically transferring said designed questionnaire to at least one loosely networked computer;
 - (c) executing said transferred questionnaire on said loosely networked computer, thereby collecting responses from the user;
 - (d) automatically transferring from said loosely networked computer to a central computer via the loose network any responses so collected to a central computer; and,
 - (e) making available in a database any responses transferred to said central computer in step (d).
8. *(Original)* The method for collecting survey data according to claim 7 further comprising:
- (a) assessing a charge for each transferred response received by said central computer.
9. *(Currently Amended)* A method for managing data transfers between computers including the steps of:
- (a) creating a questionnaire at a first site in a first computer ~~located at a second site, said first site and said second site being connected by a loose network;~~
 - (b) tokenizing said questionnaire, thereby producing a tokenized questionnaire;
 - (c) bringing a remote computer into electronic communication with said first computer;

- ~~(b)~~(d) transmitting said tokenized questionnaire to said ~~remote computer~~ a remote computer via said ~~loose network~~, said ~~remote computer~~ running an OIS;
- (c) removing said remote computer from electronic communication with said first computer;
- (f) within said remote computer, using said transmitted tokenized questionnaire to obtain at least one user response;
- (g) storing said at least one user response within said remote computer;
- ~~(e)~~(h) modifying said questionnaire with incremental changes at a second computer ~~third site in said first computer~~ located at said a second site; and
- (i) placing said remote computer into electrical communication with said second computer;
- ~~(d)~~(j) transmitting said incremental changes from said first second computer to said remote computer via said ~~loose network~~;
- ~~(e)~~(k) modifying said transmitted tokenized questionnaire in said remote computer with said incremental changes, thereby creating a modified tokenized questionnaire;
- (l) removing said remote computer from electronic communication with said second computer;
- (m) within said remote computer, using said modified tokenized questionnaire to obtain at least one additional user response;
- (n) placing said remote computer into electronic communication with a server;
- (o) transmitting said at least one user response to said server;
- (p) transmitting said at least one additional user response to said server;

- (q) storing said transmitted at least one user response and said at least one additional user response at said server;
- (r) preparing a report using any of said at least one user response and said at least one additional user response; and,
- (s) displaying at least a portion of said report on a visually perceptible medium.

10. *(Currently Amended)* The method for managing data transfers between computers according to claim 9 wherein said first site computer and said third site second computer are the a same computer.
11. *(Currently Amended)* The method for managing data transfers between computers according to claim 9 10 wherein said server and said first computer are said same computer site is at said remote computer.

Claims 12 – 16 *(Cancelled)*

17. *(New)* A method for collecting survey data from a user comprising the steps of:
 - (a) creating a questionnaire comprising a series of questions;
 - (b) tokenizing said questionnaire; thereby producing a plurality of tokens representing said questionnaire;
 - (c) storing said plurality of tokens on a computer readable medium on a first computer;

- (d) placing a handheld remote computing device into electronic communication with said first computer;
 - (e) transmitting said plurality of tokens to said handheld remote computing device;
 - (f) taking said handheld remote computing device out of electronic communication with said first computer;
 - (g) after said handheld remote computing device has been taken out of electronic communication with said first computer,
 - (g1) executing at least a portion of said plurality of tokens representing said questionnaire on said handheld remote computing device to collect a response from a user, and,
 - (g2) storing within said remote computing device said response from the user;
 - (h) placing said handheld remote computing device into electronic communication with a second computer;
 - (i) transmitting at least a portion of said response stored within said handheld remote computing device to said second computer; and,
 - (j) forming a visually perceptible report from any of said at least a portion of said response so transmitted.
18. (New) A method for collecting survey data from a user according to claim 17, wherein step (j) comprises the step of printing a report from any of said response to transmitted.
19. (New) A method for collecting survey data from a user according to claim 17, wherein said first computer and said second computer are a same computer.

20. (New) A method for modifying a questionnaire used in data management according to the method of claim 17, further comprising the steps of:
- (k) making at least one incremental change to a portion of said questionnaire;
 - (l) tokenizing said at least one incremental change to said questionnaire;
 - (m) transmitting at least a portion of said tokens resulting from step (k) to said remote handheld computing device, said transmitted tokens comprising less than the entire tokenized questionnaire; and,
 - (n) incorporating said transmitted tokens into said questionnaire at said remote computing device, thereby incrementally changing said questionnaire.
21. (New) A method for managing data according to claim 1, wherein said first network connection and said second network connection are a same network connection.

CLAIM AMENDMENT

Claim **1** has been amended to make clearer the invention claimed by the instant inventor. More particularly, this claim has been amended to more clearly reflect the fact that the remote computing device is one that is “loosely networked”. This concept is discussed throughout the instant application and, as such, does not constitute new matter.

Claim **6** has been amended to reflect the modified antecedent basis found in Claim **1** and, as such, does not constitute new matter.

Claim **7** has been amended to make clearer that the responses that are collected in step (c) are transferred from the loosely networked computer to a central computer. This concept is discussed throughout the instant application and, as such, does not constitute new matter.

New Claims **17-20** contain an explicit requirement that the handheld that is used to collect user responses be removed from electronic communication with the computer that supplied the questionnaire before data is collected. Support for this embodiment may be found throughout the instant specification and, as such, this amendment does not constitute new matter.
